Lester Haycock
Global Procurement Supplies Ltd.
419 Church St, Penrose, Auckland, New Zealand

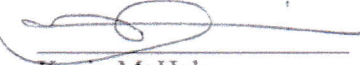

Dear Mr. Haycock,

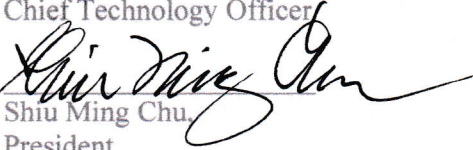

DragonBoard works hard to provide the best MgO construction panel commercially available. Long ago the use of $MgCl_2$ as a catalyst was replaced by $MgSO_4$ in our production boards (2014) before being completely removed from the product line (2016).

Over the past eight years we have manufactured and shipped over 8 million sq/m of DragonBoard sub-flooring to the world market, exclusively manufactured using $MgSO_4$ as a catalyst, a change we led the industry with: our boards contain zero $MgCl_2$, and maintain an average moisture content of 8%.

We would be happy to speak with your approval agency: if indeed their concern is "Chloride" boards, they are more than justified in their concern and are performing their duties in ensuring the integrity of the built environment.

Yours sincerely,

Kevin McHale,
Chief Technology Officer

Shiu Ming Chu,
President
